

HIDROCARBONETOS

ALIFÁTICOS

	Saturados	Insaturados
	possuem apenas ligações simples entre os átomos de carbono	possuem pelo menos uma ligação dupla (ou tripla) entre os átomos de carbono
Cadeia aberta	 <p>Ex: Propano</p>	 <p>Ex: Propeno</p>
Cadeia fechada	 <p>Ex: Ciclopropano</p>	 <p>Ex: Ciclopropeno</p>

AROMÁTICOS

Possuem pelo menos uma estrutura em anel	 <p>Ex: Benzeno</p>	 <p>Ex: Naftaleno</p>
